SUMMARY

AI engineer who builds natural-language interfaces to enterprise data — text-to-SQL systems, semantic search, and LLM-powered retrieval. Shipped production systems at Altius and Colt Technological Services, and works across the full stack from FastAPI services to React frontends. B.Tech Computer Science, graduating July 2026.

EXPERIENCE

Altius — AI Engineer Intern

Gurugram · Jan 2026 – Present

Tech: FastAPI · Azure OpenAI · Microsoft SQL Server · Python · Microsoft Copilot Studio

- Built a FastAPI middleware that lets non-technical employees query an internal Altius database directly in plain English — eliminating the dependency where every routine data request previously had to be routed through a developer to write and run SQL.
- Designed a hybrid architecture where Azure OpenAI handles intent classification and parameter extraction while query construction stays template-based — keeping the natural-language interface without the hallucination risk of fully generative text-to-SQL.
- Shipped to end users through Microsoft Copilot Studio and a built-in chat interface, with a second model call formatting raw query results back into plain-English answers.

Freelance Full-Stack Developer

Remote · Apr 2026 – Present

Tech: React · Tailwind CSS · JavaScript · HTML/CSS

- Built and shipped chikitsakitchen.com, a nutrition and dietician platform for Dr. Shilpa Arora — took it from client requirements to a deployed, responsive production site in about a week.
- Continue to maintain the live site, handling performance, content updates, and issue resolution.

Colt Technological Services — Data Engineer Intern

Gurugram · Jun 2025 – Aug 2025

Tech: Python · BigQuery · Vector Embeddings · SQL

- Built a semantic search system over the company's enterprise datasets that lets analysts get the data they need by describing it in plain language, rather than hand-writing SQL queries against unfamiliar schemas.
- Used vector embeddings with metadata indexing and SQL retrieval under the hood, cutting a typical data request from 5–10 minutes of query writing and waiting to a few seconds.
- Developed the data pipelines that kept the search index populated and current as the underlying datasets changed.

PROJECTS

LUCID — AI Productivity Platform

Live

Tech: React · Tailwind CSS · Supabase · LLM API

- Personal productivity app for habit, goal, and journal tracking, with an AI layer that surfaces patterns from a user's own logged data. Designed and shipped the full product end to end.

The Signal — AI Information Platform

Live

Tech: React · Tailwind CSS · Supabase · LLM API

- Live platform that organizes content and surfaces insights using AI; built and deployed end to end, including ongoing feature releases.

TECHNICAL SKILLS

Languages Python, JavaScript, SQL

AI & ML LLM APIs (Azure OpenAI), natural-language processing, semantic search, vector embeddings, intent classification, retrieval systems

Backend & Data FastAPI, REST APIs, Microsoft SQL Server, BigQuery, data pipelines

Frontend React, Tailwind CSS, HTML/CSS

Tools & Platforms Git/GitHub, Microsoft Copilot Studio, Firebase

EDUCATION

Manipal University Jaipur — B.Tech, Computer Science & Engineering

Expected July 2026

Suncity School, Gurugram — Class XII

2022

CERTIFICATIONS

AWS Academy Cloud Foundations · Python Essentials 1 & 2
